

is-phone® for iPhone

Softphone Application for Apple iPhone

Overview

is-phone is a second generation voice over IP softphone technology, which enables VoIP calls based on SIP and phone features. With is-phone for iPhone, users can make phone calls over WLAN (e.g. through Wi-Fi connection in homes, offices or outdoor) and can use any SIP account/provider to enable VoIP calls. The is-phone for iPhone application can be downloaded from the iTunes App store and is also available as OEM white-label product.

Leverage existing business

Telecom operators and providers are facing increased competition from existing and new market players. They can either cooperate with existing softphone providers or control their own applications by offering branded is-phone OEM products to have more flexibility and generate higher revenues. is-phone for iPhone is a perfect added-value offering which will increase revenue through higher usage and strengthen loyalty of existing customers.

Differentiate offerings

With an is-phone for iPhone OEM offering, companies can build an important differentiator to their competitors. They are able to leverage their mobile Centrex offerings and to complete their existing mobile terminals without losing customers to competitors. iscoord offers in-depth customizing including integration of proprietary features and functions with unique attractiveness, based on your and your customers' needs.
